

## WHAT IS CLAIMED IS:

1                   1. A voice-data control system for use with a  
2     communication facility including remote terminals for  
3     individual callers, wherein said remote terminals may  
4     comprise a conventional telephone instrument including  
5     voice communication means for providing audio response  
6     signals and digital input means for providing digital  
7     response signals, said control system comprising:  
8                   cue means for cueing select ones of said  
9     terminals to prompt selective actuation of said voice  
10    communication means and said digital input means to  
11    provide responsive signals;  
12                   status means to selectively identify response  
13    signals from each select terminal as digital control  
14    signals, digital data signals or audio signals;  
15                   memory means for storing individual caller  
16    data;  
17                   means for addressing individual caller data  
18    from said memory means in response to digital signals  
19    from said digital input means;  
20                   means for storing digital data signals from  
21    said digital input means as additional individual caller  
22    data;  
23                   control means for actuating said cue means and  
24    said status means to cue and identify audio signals,  
25    operation of said control means being conditioned on the  
26    failure of said means for addressing individual caller  
27    data to provide signals representative of caller data  
28    from said memory means; and  
29                   means for storing said audio signals represen-  
30    tative of caller data in said memory means responsive to  
31    cueing by said cue means.

FOI b7E b7D b7C b6 b7E b7D b7C b6

1           2. A system according to claim 1 further  
2 including interface processor means for receiving said  
3 audio signals representative of caller data and said  
4 digital signals for processing.

1           3. A system according to claim 2 wherein said  
2 interface processor includes means to isolate a subset  
3 of said callers.

1           4. A system according to claim 1 further  
2 including consumable key test means to qualify callers  
3 with respect to limited use.

1           5. A system according to claim 1 wherein said  
2 communication facility provides automatic number  
3 identification (ANI) signals and said status means  
4 selectively identifies said automatic number identifica-  
5 tion signals as digital control signals or digital data  
6 signals.

1           6. A system according to claim 5 further  
2 including consumable key test means to qualify callers  
3 with respect to limited use and wherein said callers are  
4 identified by said automatic number identification (ANI)  
5 signals.

1           7. A voice-data control system for use with a  
2 communication facility including remote terminals for  
3 individual callers, wherein said remote terminals may  
4 comprise a conventional telephone instrument including  
5 voice communication means for providing audio response  
6 signals and digital input means for providing digital  
7 response signals, said control system comprising:

8           cue means for cueing select ones of said  
9 terminals to prompt selective actuation of said voice

2025 RELEASE UNDER E.O. 14176

10 communication means and said digital input means to  
11 provide response signals;

12 status means to selectively identify respon-  
13 sive signals from each select terminal as digital  
14 control signals, digital data signals or audio signals;

15 control means implementing a stored program to  
16 control said cue means and said status means in accor-  
17 dance with said program and said digital control signals  
18 to prompt the provision of responsive signals from each  
19 select terminal in accordance with said status means;

20 means for storing responsive signals from said  
21 select terminals including digital data signals and  
22 audio signals as selectively identified by said status  
23 means; and

24 means for processing said digital signals to  
25 isolate a subset of said callers.

1 8. A system according to claim 7 further  
2 including consumable key test means to qualify callers  
3 with respect to limited use.

1 9. A system according to claim 7 wherein said  
2 means for processing includes interface processor means  
3 for receiving said audio signals representative of  
4 caller data and said digital signals for processing.

1 10. A system according to claim 7 further  
2 including a plurality of audio response units for  
3 interfacing said means for processing to said communica-  
4 tion facility.

400140 575300

11. A system according to claim 7 wherein said communication facility provides automatic number identification (ANI) signals and said status means selectively identifies said automatic number identification signals as digital control signals or digital data signals.

12. A voice-data control system for use with a communication facility including remote terminals for individual callers, wherein said remote terminals may comprise a conventional telephone instrument including voice communication means for providing audio response signals and digital input means for providing digital response signals, said control system comprising:

cue means for cueing select ones of said terminals to prompt selective actuation of said voice communication means and said digital input means to provide responsive signals;

status means to selectively identify responsive signals from each select terminal as digital control signals, digital data signals or audio signals;

control means implementing a stored program to control said cue means and said status means in accordance with said program and said digital control signals to prompt responsive signals from each select terminal in accordance with said status means, said program implementing an interface communication operation; and

means for selectively storing responsive signals from said select terminals including digital data signals and audio signals as selectively identified by said status means to indicate identification data and process data provided by said callers.

FOR THE STENO

1 13. A system according to claim 12 wherein  
2 said means for storing signals stores signals represen-  
3 tative of billing information.

1 14. A system according to claim 13 wherein  
2 said control means further implements inventory means to  
3 account for items.

1 15. A system according to claim 14 wherein  
2 said inventory means includes an inventory record of  
3 said items.

1 16. A system according to claim 12 wherein  
2 said communication facility provides automatic number  
3 identification (ANI) signals and said status means  
4 selectively identifies said automatic number identifica-  
5 tion signals as digital control signals or digital data  
6 signals.

1 17. A voice-data control system for use with  
2 a communication facility including remote terminals for  
3 individual callers, wherein said remote terminals may  
4 comprise a conventional telephone instrument including  
5 voice communication means for providing audio signals  
6 and digital input means for providing digital response  
7 signals, said control system comprising:  
8 cue means for cueing select ones of said  
9 terminals to prompt selective operation of said voice  
10 communication means and said digital input means at said  
11 terminals to provide responsive signals;  
12 status means to selectively indicate respon-  
13 sive signals from each select terminal as digital  
14 control signals, digital data signals or audio signals;  
15 control means for receiving said digital  
16 control signals for actuating said cue means and said

TOP SECRET

8 cue means for cueing select ones of said  
9 terminals to prompt selective operation of said voice  
10 communication means and said digital input means at said  
11 terminals to provide responsive signals;
